

E-Mail

❖ What is Email?

Email (short for electronic mail) is a digital method of sending and receiving messages over the internet or other computer networks. It allows people to exchange information—such as text, files, images, and links—almost instantly, regardless of distance. Email has become one of the most widely used communication tools in the world for both personal and professional purposes.

➤ Email Address Structure

An email address has three main parts:

1. **Username:** The unique name chosen by the user (e.g., john.doe).
2. **@ symbol:** Separates the username from the domain.

3. Domain name: The server hosting the email service (e.g., gmail.com).

Syntax :- username@domain

Example: hirahirolal@gmail.com, hire@bharatpayaeps.online

Note :- email is not case-sensitive.

How Email Works

Email operates using a client-server model. When you send an email:

1. Composing the Message

You create the email in an email application (such as Gmail, Outlook, Yahoo Mail) or on a web browser. You type the recipient's email address, subject, and message content.

2. Sending the Message

The email is sent from your device to an SMTP server (Simple Mail Transfer Protocol), which forwards it to the recipient's mail server.

3. Receiving the Message

The recipient's server stores the message until they check their inbox. They retrieve it using protocols like IMAP (Internet Message Access Protocol) or POP3 (Post Office Protocol).

Types of Email Domain

1. Public Email Domain :- Free for public

e.g :- hirahirolal@gmail.com, apkaname@yahoo.com

Free Email ka domain

Sl.No	Email domain	Owner/Company /{storage}
1.	Gmail.com	Google {15GB}
2.	Yahoo.com	Yahoo! (now under Verizon) {1 TB}
3.	Hotmail.com /outlook.com	Microsoft {15GB}
4.	Aol.com	AOL (part of yahoo! /Verizon) {1TB*}
5.	Gmx.com / gmx.net	GMX internet services {65GB}
6.	Protonmail.com	Proton AG (Switzerland) {1 GB}
7.	Tutanota.com	Tutao Gmbh (Germany)
8.	Icloud.com	Apple inc. {5 GB}
9.	Zoho.com	Zoho corporation
10.	Yandex.com	Yandex
11.	Mail.com	1 & 1 IONOS
12.	Rediffmail.com	

Top public email list – gmail.com (17.74%) , yahoo.com(17.34%), Hotmail.com (15.53%), aol.com (3.2%)

2. Private / Custom Domains

:- Create for companies, organisations, school or personal branding

e.g – support@amazon.com, ppup@helpenable.com,
hire@bharatpayaeps.online,.....

3. Government domains

:- Create for government departments

e.g – secretary@mea.gov.in,

4. Educational Domains

:- Create for universities, colleges, school,...

e.g – hira@ppu.ac.in, student@gdc.edu,....

5. Country – code domains

:- create for country specific TLD (Top level domain).

e.g – abc@firm.in,.....info@business.com.au (Australia),....

6. Temporary / Disposable Email

:- Use for short-term. Mostly used in spam or testing.

e.g – temp@10minteemail.com, fake@mailinator.com,...

Choise Guide

Si.No	Used	Choose email Domain
1.	ज्यादा स्टोरेज के लिए	Yahoo / AOL
2.	Productivity & tools	Gmail / outlook
3.	Apple user	Icloud mail
4.	Business / Custom domain	Zoho mail
5.	Prefer security & privacy	Protonmail, tutanota, mailfence

Advantages of Email

1. Speed – Messages are delivered in seconds.
2. Cost-effective – Most email services are free.
3. Attachment support – Documents, images, videos, and other files can be sent easily.
4. Accessibility – Can be accessed from computers, smartphones, or tablets anywhere with internet access.
5. Record keeping – Emails can be stored, searched, and retrieved as needed.

Uses of Email

1. **Personal Communication:** Staying in touch with family and friends.
2. **Business Communication:** Sending reports, proposals, or meeting invites.
3. **Marketing:** Businesses send newsletters, offers, and promotions to customers.
4. **Official Documentation:** Sharing legal, academic, or corporate information.

Web – Based Email

→ Those email which access in any browser (chrome,firefox,opera,.....) by using login id and password.

E.g – Gmail, Yahoo, outlook,zoho,protonmail,.....

➤ Limitations of Email

1. **Spam and Junk Mail** – Unwanted advertising messages.
2. **Phishing Attacks** – Fraudulent emails trying to steal personal data.
3. **Overload** – Too many emails can overwhelm inboxes.
4. **Requires Internet** – Cannot be used offline except for drafting.

➤ Security in Email

To protect email communication, encryption methods like SSL/TLS are used. Users are advised to use strong passwords, enable two-factor authentication, and be cautious with suspicious links or attachments.

➤ Protocol of Email = 4 Types

1. SMTP (Simple mail Transfer protocol)

→ To send E-mail

2. IMAP (Internet message access protocol)

→ To retrieve / receive e-mail, Access anywhere anytime any device. This type of protocol all message save in server and give me copy sync. Use of this protocol message access any device any time. E.g. – Gmail, Yahoo

(इंटरनेट पर मैसेज को control करना इसी प्रोटोकॉल का काम है)

3. POP3 (Post office Protocol version 3)

→ To retrieve / Receive email, for specific device not access any where, install software in this. This type of protocol all message save in server but one time seen any device then automacti message delete in server and permanent save in this device.

E.g – Apple, Microsoft,.....

4. MIME (Multipurpose internet mail)

→ Used for e-mail attachment files (.jpg,.mp3,.mp4,.pdf,.docx,.....)

How to Sending E-mail in Gmail

1. Click on Compose button. It follows the screen as shown in Fig.

Note :- E-mail messages are similar to letters, with two main parts:- 1. Header 2. Body

1. Header :- The header contains the name and address of the recipient, the address of anyone who is being copied, and the subject of the message.
2. Body :- The body contains the message itself. In header section

Type the e-mail address of the recipient in the “To:” field. For more than one person, e-mail id should separate by commas. At least one

3. Type the recipient's address in the 'To' field.
4. Type subject of your message in the "Subject:" field. Use the large text box to enter the contents of your message.
5. In the "cc:" field, enter the email address of those to whom you would like to send a **"carbon copy"** of your message. All other recipients of that message will be able to see that the person you designed as a "cc:" has received a copy of the message.
6. In the "Bcc:" field, enter the email address of those to whom you would like to send a **"blind carbon copy"** of your message. This is almost similar to the "Cc:" feature, except that "Bcc:" recipients are invisible to the "To:" and "Cc:" recipients of the message as well as to each other.
7. Click on Attach files for attaching file(s) and Insert Photos to include Photos if required.
8. Click on send button to send the message.
